

Facts at Your Fingertips

A Guide to Sources of
Statistical Information on
Major Health Topics

Fifth Edition

U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES • Public Health Service • Office of Health Research, Statistics, and Technology • National Center for Health Statistics

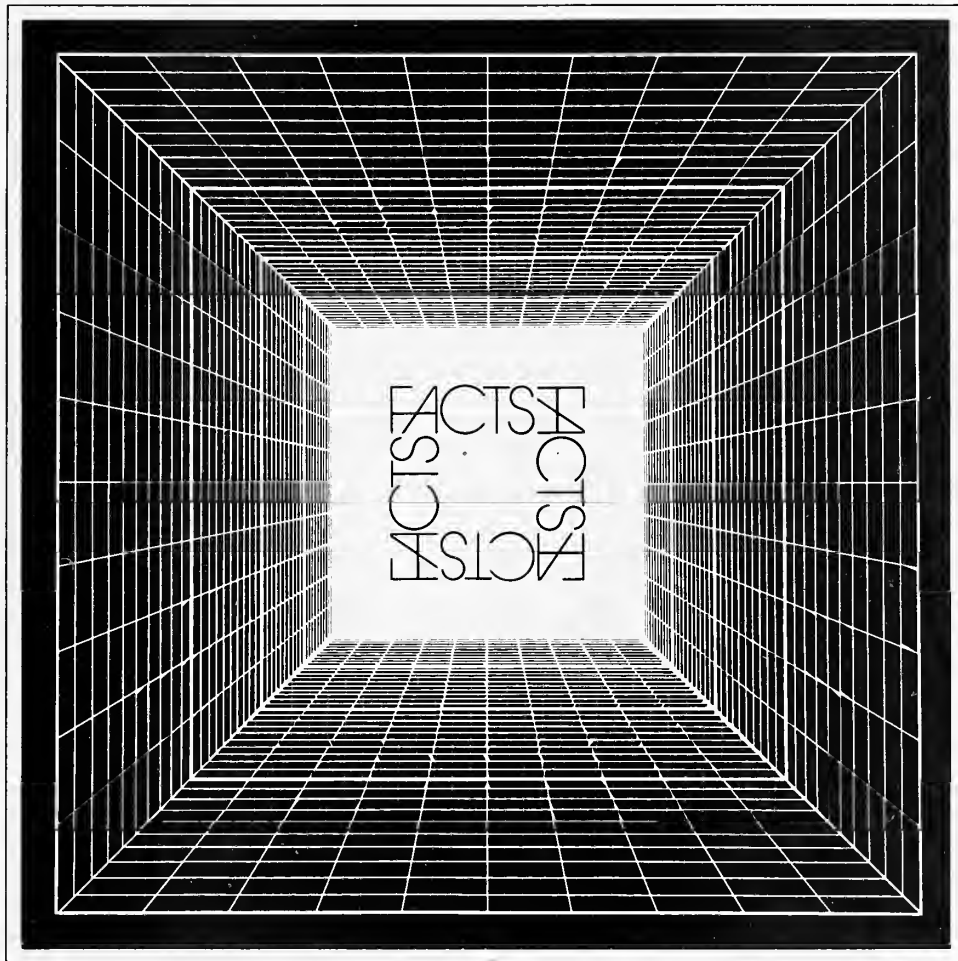

A large, stylized graphic of a perspective grid, resembling a tunnel or a series of nested rectangles, creating a sense of depth. The grid lines are white on a dark background. In the center of the tunnel, the word "FACTS" is written in a large, bold, sans-serif font, with the letters slightly overlapping and appearing to float within the space.

Health Care Statistics*

ALICE HAYWOOD, *Information Officer*

Division of Data Services

PHILLIP BEATTIE, *Director*

SANDRA SURBER SMITH, *Chief, Scientific and Technical
Information Branch*

This guide lists sources of statistical information on some of the major health topics. It is by no means a comprehensive or definitive list; however, it does attempt to identify major areas or topics of interest and to describe the kinds of data now available or in preparation. Under each topic, the National Center for Health Statistics publications or data are cited first, followed by other DHHS sources, other Federal agencies, and by private organizations or associations. This edition includes a number of references to non-statistical publications to respond to requests for general information on selected topics. We welcome your ideas and suggestions for additional topics to be included in future editions.

For the National Center for Health Statistics reports, VHSS refers to Vital and Health Statistics Series; MISC to miscellaneous reports; MVSR to the Monthly Vital Statistics Report; VSUS to the Vital Statistics of the United States; and ADVANCEDATA to itself.

As long as supplies last, most of the publications listed in this edition of Facts at Your Fingertips are available free from the Scientific and Technical Information Branch (STIB), Division of Data Services, NCHS, Room 1-57, 3700 East-West Highway, Hyattsville, Maryland 20782--or phone the publications hotline (301) 436-NCHS. In the spring of 1981 NCHS implemented a new distribution policy which limits the free distribution of certain NCHS publications--Vital Statistics of the United States, Vital and Health Statistics Series, and other major reports--to libraries and other selected institutions. These reports are on sale from the Government Printing Office. STIB can provide ordering information. Monthly Vital Statistics Reports, Advance Data, and other periodicals as well as catalogs and listings remain available to all users. For information on publications, distribution policy, reference questions, or other assistance, please call our information staff on (301) 436-8500.

Mr. Dan Taylor

The Bureau of Labor Statistics publishes rates of absence from work resulting from illnesses and injuries among nonfarm wage and salary employees who usually work full time (35 hours or more a week). Information is collected once a year, in May, 56,000 households, conducted for the Bureau of Labor Statistics by the Census Bureau. Rates of incidence (percent of workers absent) and inactivity (percent of scheduled time lost) by various industry, occupation and demographic groups are available for 1973 forward.

Published The Status of Children, Youth, and Families 1979. This report
is the third in the series of biennial reports on the conditions of children,
youth, and families. It compiles and describes statistics from a wide
variety of both Federal and nonfederal sources that pertain to children,
youth, and families, and to the conditions, trends, and programs that
affect them. This new edition contains a number of features not found
in earlier versions. For example, Chapter 2: Life Cycle Development,
treats the factor of time in human development, from birth through
death, and identifies characteristics of the various stages of life and
some of the potential problems. Chapter 6: Status of Research Related
to Children, Chapter 7: Status of Research Related to Youth, and Chapter
8: Status of Research Related to Families are also new. They are added
because research is increasingly recognized as an aid in understanding
the conditions of children, youth, and families and can provide us with
knowledge about how to improve or prevent these conditions.

Tel: (301) 251-5500

The National Criminal Justice Reference Service (NCJRS) is a clearinghouse of information about law enforcement and criminal justice. The NCJRS collection currently contains nearly 40,000 research reports, published papers, books, articles, and audiovisual presentations. NCJRS reference specialists respond to individual reference queries by conducting computer searches of the NCJRS data base. They furnish single copies of selected documents and identify additional sources of information. NCJRS publishes a series of topical bibliographies on subjects of special interest. These reference aids highlight current literature and many of them contain additional sources of information. To receive monthly announcements of documents available write or telephone NCJRS at the above number and ask for a registration form.

SSA has conducted surveys of the disabled in 1966, 1972, 1974 and 1978. Detailed reports on the characteristics of the disabled, on income and assets, on labor force activity, on medical care utilization and on adjustments to disability are available from the first 2 surveys. Several similar reports from the 1974 survey are now available. In addition, statistics on applicants for and beneficiaries of the SSA disability programs are prepared from program records. Some findings from the 1978 survey will be published in chartbook form this fall.

DRUG ABUSE (Continued)

The NIDA Statistical Series publications deal with a variety of data relating to drug abuse treatment, clients, and facilities. Included are annual and quarterly reports from the Client Oriented Data Acquisition Process (CODAP), a required reporting process for all units which receive rehabilitation services. Annual reports from the National Drug Abuse Treatment Utilization Survey (NDATUS), a national survey effort designed to measure the scope and use of drug abuse treatment services throughout the United States regardless of funding source. Special topical and trend reports are also available in the Statistical Series. The quarterly reports from the Drug Abuse Warning Network (DAWN), a non random sample of hospital emergency rooms and medical examiners/coroners drug abuse episodes from 26 SMSAs.

At the present time NCHCT is publishing a number of documents on health care technology assessment. The first is an NCHCT monograph series of overview papers on particular technologies, including "Radiographic Examination of the Colon," "Ultrasound Diagnostic Techniques in Cardiology" (in preparation), "Coronary Artery Bypass Grafting: One Internist's Perspective" (in preparation), "Dental Radiology" in preparation with the Bureau of Radiological Health/FDA, and "End-Stage Renal Disease" (in preparation). NCHCT hopes to publish several others during FY 81.

The Center is also publishing a summary and proceedings of its National Conference on Maternal Serum Alpha-Fetoprotein, a new Fact Sheet describing the mandate and functions of the Center, and a series of pamphlets defining the goals and purposes of the various subcommittees of the National Council on Health Care Technology. These include a statement of criteria for selection of candidate technologies for assessment.

At the present time, NCHCT has a Research Grant Announcement available.

HEALTH INDEXES

NCHS:

Clearinghouse on Health Indexes
Division of Analysis
National Center for Health Statistics
3700 East-West Highway, Room 2-27
Hyattsville, MD 20782

Tel: (301) 436-7035

The Clearinghouse of Health Indexes has been established by the National Center for Health Statistics to promote the development and utilization of indexes of health. It focuses on technical and scientific information related to the construction of quantitative measures of health, rather than disease.

This information center obtains and classifies documents, both published and unpublished, and prepares annotated bibliographies of the holdings. Current research on health indexes and the principal investigators carrying it out are identified and categorized; this file includes information about the applications of health indexes, as well as about methods for their construction. In addition, the Clearinghouse meets with various investigators to learn first hand about developments in the field and sponsors meetings to advance the state of the art.

By collecting and maintaining up-to-date information, the Clearinghouse provides the following three services: (a) bibliographies on specified subjects, (b) referrals to informed persons or organizations, and (c) the dissemination of new information on health indexes.

Dynamic interaction between all persons interested in the development of health indexes will stimulate growth within the field. The Clearinghouse staff urges active communication and participation. For further information, contact the Clearinghouse at the address or phone number listed above.

To obtain a copy of (HRA) 80-1225, Clearinghouse on Health Indexes, call (301) 436-NCHS.

REFER:

National Health Information Clearinghouse
1555 Wilson Blvd., Suite 600
Rosslyn, VA 22209

Tel: (703) 522-2590

The National Health Information Clearinghouse (NHIC) is a central referral source designed to help answer questions on health. NHIC was created to provide increased access to the wide variety of health resources available by answering the question "Where do I go for Health Information?" NHIC only provides information on health resources; NO medical advice or referrals to individual physicians are given. In addition to inquiries, NHIC services include a database on health resources, publications and a mailing list which you may be placed on.

The Bureau's division of Product Surveillance collects, evaluates, and maintains experience data in an automated information system entitled, "The Device Experience Network" (DEN). These data primarily involve reports of injuries, hazards, and illnesses associated with the use of medical devices and in vitro diagnostic devices. However, product improvements and other user-related concerns are also reported and included in the database. For further information concerning data and reports from the system, telephone DEN at the number listed above.

PCMR provides advice and assistance in the following areas: (1) evaluation of the adequacy of the national effort to combat mental retardation; (2) identification of the potential of various Federal programs for achieving Presidential goals in mental retardation; (3) provision of adequate liaison between Federal activities and related activities of State and local governments, foundations and other private organizations; and (4) development and dissemination of such information as will tend to reduce the incidence of retardation and ameliorate its effects. The Committee makes an annual report to the President concerning mental retardation. Such additional reports or recommendations may be made as the President may require or as the Committee may deem appropriate.

Publications Include: Mental Retardation: Century of Decision (March 1976); Mental Retardation Past and Present; Mental Retardation: The Known and the Unknown; Mental Retardation: Trends in State Services; Mental Retardation and the Law - A Report on Status of Current Court Cases; The Problem of Mental Retardation; Hello World MR78: The Leading Edge - Service Programs That Work; International Summit on Prevention of Mental Retardation From Biomedical Causes; Proceedings of a National Multicultural Seminar on Mental Retardation Among Minority Disadvantaged Populations.

A PCMR Publications List is also available free of charge.

Published report, 1976 Survey of Institutionalized Persons: A Study of Persons Receiving Long-Term Care (Current Population Reports: Special Studies: Series P-23; No. 69). This report presents data from the Survey of Institutionalized Persons (SIP) conducted by the Bureau of the Census in 1976 for the U.S. Department of Health, and Human Services. The survey focused on long-term institutions, that is, facilities which offer residential care to persons for an average of 30 days or more. For this study, long-term care institutions were classified into six major types; nursing homes and homes for the aged, facilities for children, facilities for the physically handicapped and mentally handicapped, psychiatric institutions, and "other" long-term institutions such as those offering care for chronic diseases and extended care facilities of short-term hospitals.

This survey was designed to (1) provide a three-dimensional statistical profile of long-term institutionalization--the institution, the resident, and the resident's family; (2) update the 1967 Survey in Institutionalized Adults conducted for the Social Security Administration; and (3) provide baseline data for policy and program planning.

There are six major areas of concern examined by the SIP: (1) Appropriateness of placement/admission and discharge; (2) institutional environment; (3) resident's rights and legal status; (4) level and effect of care; (5) financial considerations; and (6) effect of government programs and policies.

Incidence rates and estimates of number of injuries and illnesses are shown for broad industry categories (e.g., construction and manufacturing) and for specific industry activities at the 2-, 3-, and 4-digit Standard Industrial Classification levels. Data

are reported annually in a press release, summary, and bulletin. In addition, selected data are released in a series of industry guides as aids to employers for evaluating their firm's injury and illness experience. There are national and State data available.

The occupational injury and illness statistics program has expanded to provide additional information particularly important in understanding the occurrence of injury and illness.

The Work Injury Report program examines accidents from responses by the affected workers to questionnaires. Questions yield information about the activity of the workers at the time of the accident, type of equipment involved, working conditions at the worksite, and the extent of worker experience and training.

Handicapping Conditions Served: All handicapping conditions

The Organization: The National Clearinghouse of Rehabilitation Training Materials (NCHRTM), located at Oklahoma State University, is funded by the Rehabilitation Services Administration, Department of Health and Human Services, to disseminate information on rehabilitation with primary concentration on training materials for use by educators of rehabilitation counselors. Personnel working in the areas of staff development, inservice training, and continuing education are also served by the Clearinghouse.

Information Services: NCHRTM usually has between 250 and 300 titles to distribute free to requestors in the rehabilitation field. Microfiche or xerox copies of other publications in the Clearinghouse collection can be made for a cost recovery fee.

An annotated bibliographic newsletter, NCHRTM Memorandum, on publications available from the Clearinghouse and other sources is published quarterly. Materials in rehabilitation and related areas are reviewed as a current awareness service. A bibliography listing Institute on Rehabilitation Issues publications is also available.

NCHRTM helps inquirers identify publications relevant to their information needs, making referrals to outside organizations when necessary. Clearinghouse services are available primarily to professionals who have training interest in rehabilitation and related fields.

This office has periodically collected data on smoking from 1965 to 1975 (adults) and from 1968 to 1974 on teenagers. "Adult Use of Tobacco, 1975" includes sections on demographic characteristics of smokers, smoking behavior and attitudes, trends for 1965, 1970, and 1975. "Teenage Smoking" was published for 1968, 1970, 1972 and 1974. Also published the 1975 Health Professional Survey which focused on the smoking habits of physicians, dentists, nurses and pharmacists. This office also maintains a Technical Information Center which collects, organizes, and disseminates scientific and technical information on all aspects of smoking and its effect on health. Publications issued by the Technical Information Center include the Smoking and Health Bulletin, published eight to ten times year years; the Bibliography on Smoking and Health, biennial; State Legislation on Smoking and Health, issued annually; the Directory of On-Going Research in Smoking and Health, biennial; State Legislation on Smoking and Health, annual; and the Health Consequences of Smoking, a congressional report issued annually. They also have available the Surgeon General Report for 1979.

SBAA provides information on the association and the birth defect spina bifida, publishes booklets providing lay information, publishes a newsletter the PIPELINE 6 times a year, and maintains a Professional Advisory Committee which follows research being conducted by individuals or organizations into the birth defect.

SBAA is a voluntary association of parents of children with the birth defect, individuals with spina bifida, and professionals providing medical, educational or vocational support. The organization is establishing a research foundation to fund specific slides/films aimed at informing about the potential of individuals born with this birth defect. They advocate with government agencies on behalf of individuals and the association's views.

Has statistics and literature on end-stage renal disease dialysis and transplant patients and facilities in the United States. Publications include: ESRD Annual Report to Congress--1979; ESRD Annual Report to Congress--1980; Renal Provider List; Facility Survey Tables; Living with End-Stage Renal Disease (a booklet which is being revised).

NCHS collects data on surgical operations, however, NCHS does not make judgements as to the necessity of specific operations. Definitions of unnecessary surgery vary from anything that isn't emergency, life-saving surgery to rates of surgery in the U.S. which exceed those for other countries. Many of the estimates of unnecessary surgery have come from Dr. Sidney Wolfe of the Ralph Nader-founded Science Institute in the Public Interest. Dr. Wolfe testified before the House Subcommittee on Oversight and Investigation, Committee on Interstate and Foreign Commerce, as did several HHS officials and others during hearings since 1975. Reports produced by the House subcommittee include: "Cost and Quality of Health Care: Unnecessary Surgery," January 1976, and "Surgical Performance: Necessity and Quality," December 1978.

Background information about the question of unnecessary surgery can be obtained from:

The National Eye Research Foundation is a non-profit organization engaged in vision research, professional education, and the dissemination of eye care knowledge to the public. According to the foundation approximately one million people in the U.S. are legally blind, and others are becoming blind at the rate of about 30,000 a year. Publications include Contact lenses-Whats New?, Orthokeratology-Corrective Eye Care through Contact Lenses, and Myopia Control.

Information Office

The National Eye Institute has surveyed available statistics on visual disorders, visual disability, blindness, eye care procedures, and the economic and social cost of these disorders. Sources of these data include NCHS, health statistics firms, health insurance companies, pharmaceutical and optical manufacturers associations, and private and Government agencies serving the blind and visually handicapped. The NEI has the final report (1970) on the incidence and prevalence of legal blindness in the 16 states of the Model Reporting Area for Blindness Statistics (no longer in existence). This includes data on the degree and causes of visual loss in the legally blind population of these states. Reports are also available on the prevalence of diabetic retinopathy and chronic openangle glaucoma and on the results of the Framingham Eye Study which measured the prevalence of selected eye diseases and identified health factors associated with them in a defined population.

Statistical information about blind and visually impaired persons is disseminated in two ways. First, AFB has developed an on-going indexing system, the Statistical Information System on Visual Impairment and Blindness (SIS/VIB), to date covering over 300 documents. The system focuses on the social and demographic characteristics of persons with visual loss. It includes most major statistical sources on visual impairment and blindness, as well as comparative statistical sources for persons with other impairments, and for the U.S. population. SIS/VIB consists of four indexes: The Topical Index, the Statistical Index, the Data Base

Index and the Place Name Index. The Topical Index allows cross-referencing of terms which are the major topics of the document, while the Statistical Index identifies terms on which statistical information is available in the document.

Second, a series of "Statistical Briefs" is published periodically in the Journal of Visual Impairment and Blindness. These briefs include analyses of published data covered in SIS/VIB, previously unpublished data from major national data bases (such as NCHS' Health Interview Survey), and data from research projects conducted by AFB. A booklet containing the first ten "Statistical Briefs" (1978-80) will soon be available from the Publications Department. Topics covered in that booklet will include recent prevalence estimates, discussion of concepts used to measure visual loss, projections of the elderly blind and visually impaired population, analyses of employment and under-employment, estimates of multiply impaired blind persons, estimates of the school-age visually handicapped population, and information about low vision and other blindness agency services.

Request for statistical information are answered with figures from Statistical Briefs where possible, or through use of SIS/VIB to access the requested data. Requests for a bibliography of sources in a given topic area can also be provided through SIS/VIB.

Health Status of American Women, a presentation from the Director, Dorothy P. Rice of the National Center for Health Statistics. This presentation deals with the health status of the working women. Comparisons are made between working women, women not in the labor force, and men in the labor force.

The U.S. Department of Health and Human Services, Health Resources Administration produced a report entitled, "Public Health Reports, Supplement to the September-October 1980 issue Women and Health, United States, 1980." This report contains data from NCHS as well as other agencies. The report covers statistics on Morbidity and Mortality, Health Concerns, Reproductive Health, the Health Care System and special concerns for women.

Copies of this report may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Tel: (202) 783-3238 - there is a fee of \$3.00
